
AI Investment Advisor

Tell it how much money you have. It tells you where to put it.

Atharva

Project Based Learning, 2026

atharva.funl.bio

The problem

Most people leave their savings in a bank account, where inflation eats the value year after year.

Advice from banks and apps is generic, or it points you at the products they earn from.

A normal person cannot read the market every day and act on it.

What we built

A web app that takes three answers from you and returns a plan for your money, backed by live market data.

Risk score

A number from 0 to 100 that says how much risk suits you.

Where to invest

Your money split across five options, in rupees and in percent.

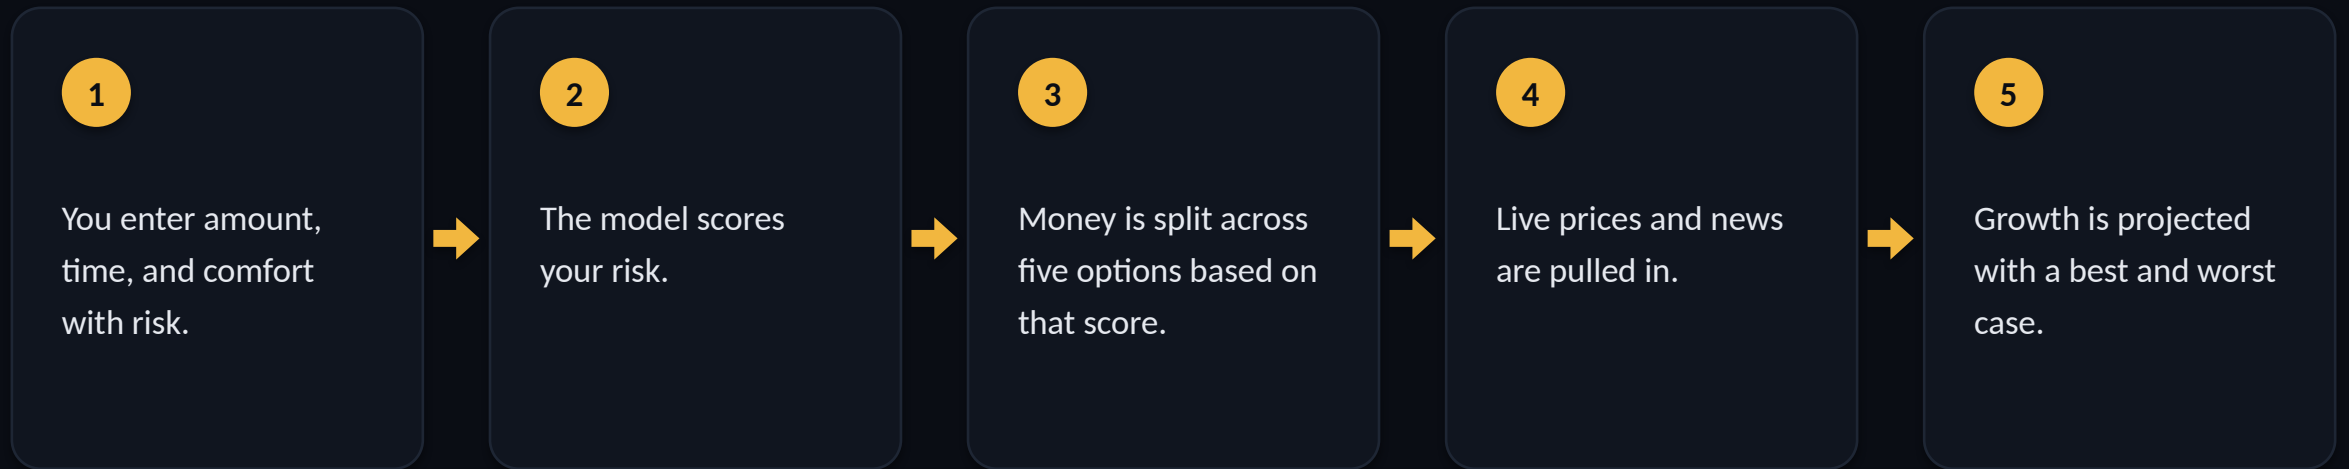

Live market and news

Five stock picks with today's price, and today's headlines.

Growth projection

What the amount could become over the period you chose.

How it works

The AI part

Risk model

A logistic regression model, one of the simplest there is.

Trained on 2,000 investor profiles: amount, time horizon, and stated risk preference.

It returns one number, a risk score from 0 to 100.

News reading

Every headline we pull is scored as positive, neutral or negative.

Those scores are combined into one market mood for the day.

Positive

Neutral

Negative

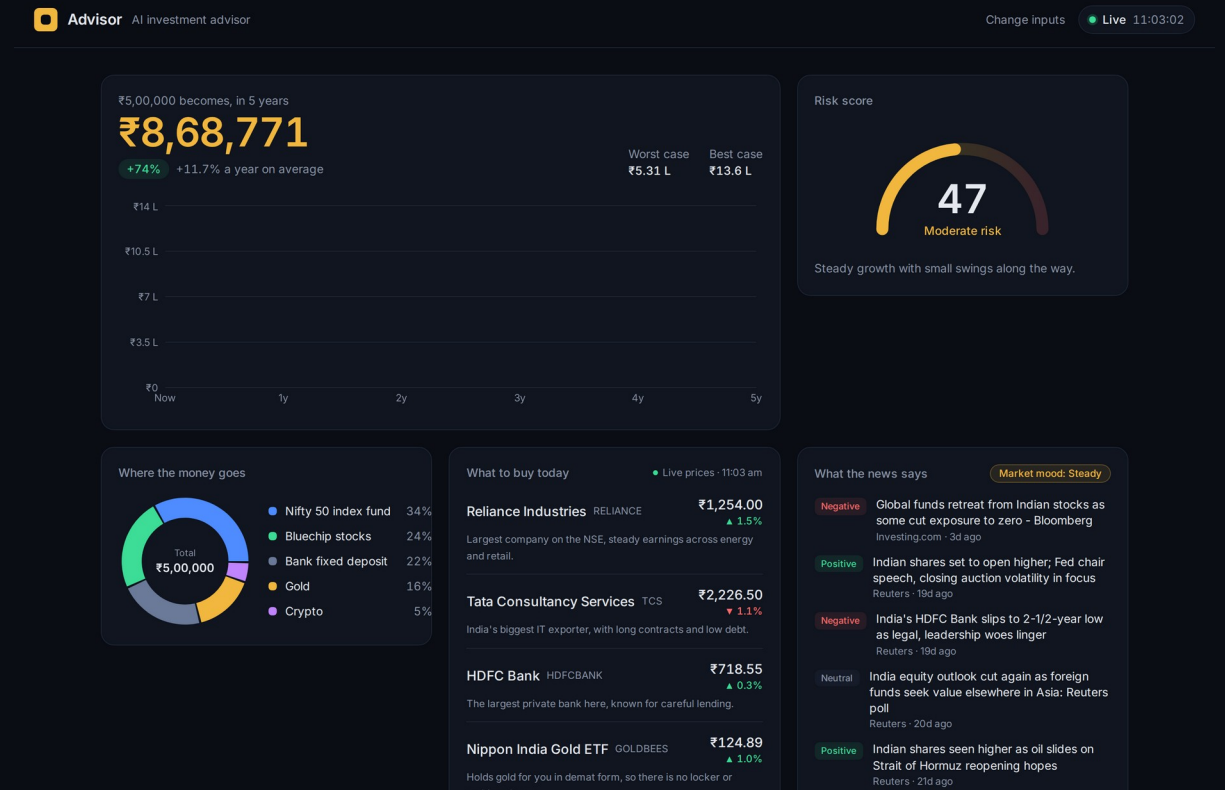

Both models are small and easy to explain. Neither one predicts prices, and neither is a guarantee.

Live demo

atharva.funl.bio

Example: 5 lakh, 5 years, moderate risk.

The app is live now. Built with React and FastAPI, code on GitHub.

Data sources

Prices and news

Yahoo Finance, live. NSE tickers for Reliance, TCS and HDFC Bank, plus a Gold ETF and Bitcoin priced in rupees.

Expected returns

Published long-run averages for each of the five asset classes.

Risk model training data

2,000 investor profiles generated from investor profile rules.

What next

SIP mode

Invest a fixed amount every month instead of once.

Broker connection

Link a broker account so the app can place the order for you.

Hindi and regional languages

The same advice in the language the user thinks in.

Alerts

A message when the news turns negative on something you hold.

Thank you.
